

PRESS RELEASE – The Missing Lynx?  
Bonsall, CA  
July 25, 2020

It's been over 700 years since a Eurasian Lynx has been seen in Scottish forests. That may be about to change via a well-planned reintroduction program to bring this beautiful and necessary apex predator back into remote areas.

Biologists and wildlife conservationists are working with locals so that they understand that the lynx is a natural solution to a real problem of a roe deer population that has been spiraling out of control and creating significant environmental impacts.

This variety of Lynx once roamed throughout northern Europe and down through the mountains of Tibet. Habitat loss and being hunted for its coat almost wiped out the entire species. Luckily prior reintroduction programs have been successful elsewhere in Europe, and small populations are taking hold.

Tashi, a Eurasian Lynx ambassador, helps Wild Wonders educate the public about his species and their challenges. Through onsite Experiences and Virtual Safari education programs, visitors and viewers learn not only about the animals themselves, but the ongoing conservation efforts to keep them safe in their natural environments.

Tashi can be seen in the Cat Education 101 Animal Experience.
